TransitOps — UI/UX Theme Guide

Design system reference, extracted from the live frontend (`css/style.css`, `css/components.css`) — "Premium Dark Glassmorphism" theme.

1. Design Philosophy

> **Dark-first, glass-layered, amber-accented.** The UI uses a deep navy/near-black base with translucent frosted-glass panels (backdrop blur), a warm amber primary accent against cool blues for status/info, and generous rounded corners throughout.

> **Role-appropriate density.** Data-heavy tables and stat grids for managers/analysts; simple guided forms for dispatch/data-entry tasks.

> **Status is always color + shape coded** — every entity status (vehicle, driver, trip, maintenance) renders as a pill badge with a colored dot, never color alone, so meaning survives grayscale printing.

2. Color Palette

Backgrounds & Surfaces

bg-primary	bg-secondary	bg-card	bg-card-hover	bg-input
#0a0e1a	#111827	#1a2236	#1f2a42	#0d1524

border
#1e2d4a

Accent Colors

accent-amber (primary)	accent-amber-dark	accent-amber-light	accent-blue	accent-blue-dark
#f59e0b	#d97706	#fbbf24	#3b82f6	#2563eb

Semantic / Status Colors

success / available	info / on_trip	warning / in_shop	danger / suspended	neutral / retired
#10b981	#3b82f6	#f59e0b	#ef4444	#6b7280

draft
#8b5cf6

Text

text-primary	text-secondary	text-muted
#f1f5f9	#94a3b8	#64748b

3. Typography

Headings: **Poppins** (600–800 weight). Body/UI text: **Inter** (400–600 weight). Loaded via Google Fonts.

Poppins 800 / 28px **Page Title Example**

Poppins 600 / 28px	Page Title Example
Poppins 700 / 22px	**Section Heading**
Poppins 600 / 16px	Card Title
Inter 500 / 14px	Body / label text
Inter 400 / 13px	Secondary / muted paragraph text
Monospace / 12px	`TRIP-A1B2C3D4 (codes, IDs, credentials)`

4. Spacing & Radius Scale

Spacing (4px base unit)

4 8 12 16 24 32 48 64

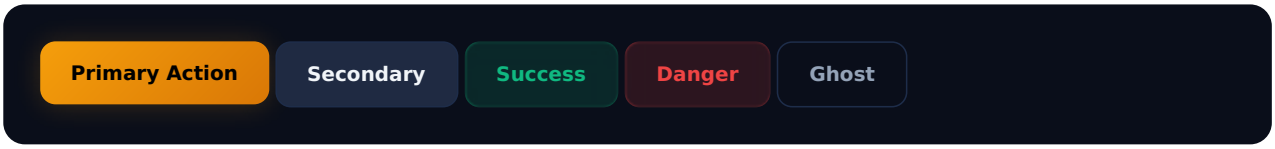

Border Radius

Token	Value	Used for
`--radius-sm`	6px	small controls
`--radius-md`	10px	buttons, inputs
`--radius-lg`	16px	cards, stat cards
`--radius-xl`	24px	modals, hero panels
`--radius-full`	9999px	badges, avatars, pills

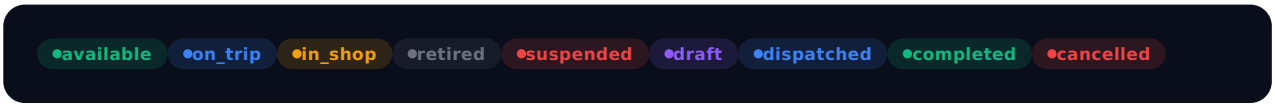

5. Components (live-styled previews)

Buttons

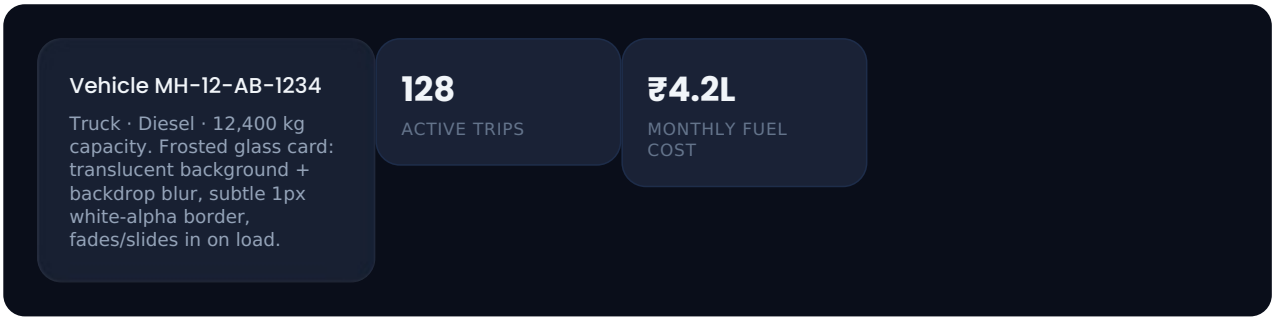

Primary = amber gradient with glow shadow, used for the single most important action per view (e.g. "Dispatch Trip"). Danger/Success are tinted-background, not solid, until hover.

Status Badges

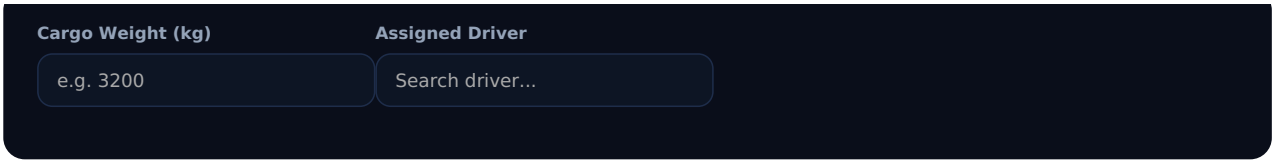

Every badge = 15% opacity fill of its status color + full-opacity text/dot in that color. Same color mapping is reused for vehicle, driver, trip, and maintenance statuses for consistency.

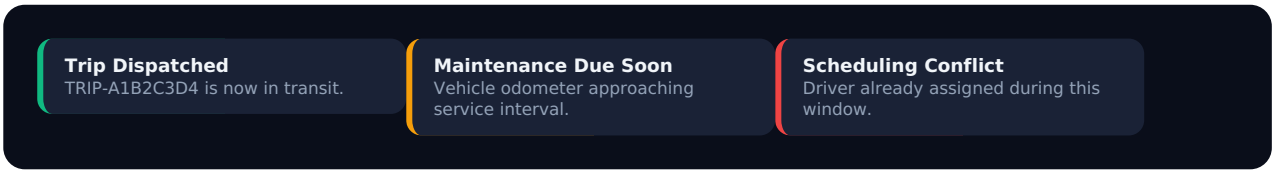

Cards & Stat Cards

Form Controls

Toast Notifications

6. Layout Structure

Region	Spec
Sidebar	Fixed width 240px, frosted glass (12px blur), nav grouped by section label, active item highlighted in amber
Header	64px height, 16px blur glass bar, page title (Poppins) + header actions (notifications, user menu)
Main content	Fluid width, radial amber/blue glow accents at 5% opacity over the primary background
Auth page	Split layout — left: hero/brand panel with feature list; right: form panel with demo-account quick-fill buttons

7. Motion & Interaction

Token	Duration	Usage
--transition-fast	150ms ease	button/link hover states
--transition-base	250ms ease	card hover, panel transitions
--transition-slow	400ms ease	modal/overlay entrances

Cards fade + slide in on page load (staggered 0.1s per card, up to the 4th). Primary buttons lift 1px and intensify their glow on hover; scale down slightly on press for tactile feedback.

8. Accessibility & Consistency Notes

> Status is conveyed by color **and** a leading dot + text label — never color alone.

> Primary button color (amber) is reserved for the single primary action per screen to avoid competing calls-to-action.

> Body text uses Inter for legibility at small sizes (down to 10.5–11px in dense tables); Poppins is reserved for headings/titles only.

> Recommendation: verify amber-on-dark and status-badge text meet WCAG AA contrast (≥4.5:1) at production font sizes — current amber-on-black button text uses pure black (#000) on amber for maximum contrast by design.
