TransitOps User Manual

User Manual

TransitOps — Fleet & Logistics Operations Platform

Version: 1.0 **Audience:** End users (Fleet Managers, Dispatchers, Safety Officers, Financial Analysts, Viewers) **Companion documents:** PRD, UI/UX Theme Guide

---

1. Getting Started

1.1 Logging In

Open the app and go to the **Login** page. Enter your email and password and sign in. If you don't have an account, use one of the seeded demo accounts below (see README for setup instructions):

Role	Email	Password
Fleet Manager	`manager@transitops.com`	`password123`
Dispatcher	`dispatcher@transitops.com`	`password123`
Safety Officer	`safety@transitops.com`	`password123`
Financial Analyst	`analyst@transitops.com`	`password123`

1.2 Forgot Password

Click **Forgot Password** on the login page, enter your email, and check your inbox for a reset link (valid 15 minutes).

1.3 Navigation

After logging in you land on the **Dashboard**. The left sidebar lists the pages available to your role: Dashboard, Trips, Vehicles, Drivers, Fuel & Expense, Maintenance, Reports, Analytics, Tracking. Pages or actions your role isn't permitted to use are hidden or will show a permission error if attempted directly.

---

2. Dashboard

Shows fleet-wide KPIs at a glance: vehicle counts by status, driver counts, trip counts by status, open maintenance count, and financial summary (revenue, costs, net profit, fuel efficiency, ROI). Data refreshes from the cached reporting endpoint (may lag up to 5 minutes behind the very latest change).

---

3. Trips (primary workspace for Dispatchers)

3.1 Viewing Trips

The Trips page lists all trips with filters for status, priority, vehicle, driver, date range, and a search box (matches trip code). Use **Apply Filters** to run a search and **Reset** to clear it. Results load more as you scroll/click **Load More**.

3.2 Creating a Trip

Click **New Trip**, fill in source, destination, vehicle, driver, cargo weight, and the scheduled date/ETA window, then save. The trip is created in **Draft** status.

The system will block the save and show an error if: - The selected vehicle is retired or doesn't exist - The selected driver is

suspended, has an expired license, or doesn't exist - Cargo weight exceeds the vehicle's max load capacity - The vehicle or driver is already booked on another trip during an overlapping time window (the conflicting trip code is shown)

3.3 Editing a Trip

You can only edit a trip while it's still in **Draft**. Once dispatched, its core details are locked — cancel and recreate it instead if something needs to change.

3.4 Dispatching a Trip

From a Draft trip, click **Dispatch**. This locks in the vehicle and driver (both become "on trip") and moves the trip to **Dispatched**. If the vehicle/driver became unavailable since the trip was drafted, dispatch will fail with an explanation.

3.5 Completing a Trip

Once a trip is dispatched/in transit/delivered, click **Complete** and enter the actual distance traveled, fuel consumed, and revenue earned. This releases the vehicle and driver back to "available" and updates the vehicle's odometer. If the vehicle is now due for service soon, you (and other users) will see a maintenance-due notification.

3.6 Cancelling a Trip

Available only while a trip is Draft or Dispatched. Click **Cancel** — any reserved vehicle/driver is released back to available.

3.7 Trip Statuses at a Glance

`draft` → `assigned` / `loading` → `dispatched` → `in_transit` → `delivered` → `completed`, or `cancelled` at any point before completion. Once `completed` or `cancelled`, a trip can never change status again.

---

4. Vehicles (managed by Fleet Manager)

View all vehicles with their status (available / on trip / in shop / retired), type, fuel type, capacity, and odometer. Fleet Managers can add a new vehicle, edit details, or remove a vehicle (removal is a soft delete — the record is retained but hidden from lists). Other roles can view but not modify vehicle records.

---

5. Drivers (managed by Safety Officer)

View all drivers with status (available / on trip / off duty / suspended), license category and expiry, and safety score. Safety Officers can add a new driver (license number and contact number are stored encrypted), edit details, or remove a driver. Other roles can view but not modify driver records.

---

6. Fuel & Expense (managed by Financial Analyst)

Two tabs: - **Fuel Logs** — record fuel purchases per vehicle (liters, cost, station, optional trip link). A "live rates" reference shows today's approximate per-liter cost by fuel type. - **Expenses** — record other vehicle costs by category: toll, insurance, tax, fine, parking, or other.

Financial Analysts and Fleet Managers can add entries; all roles can view the logs.

---

7. Maintenance

Fleet Managers and Safety Officers can open a maintenance record against a vehicle (description, type — preventive/corrective/inspection/emergency — and cost). Opening a record automatically takes the vehicle out of service (**in_shop**) — this is blocked if the vehicle is currently on a trip or already retired. Closing a record (with final cost/notes) automatically returns the vehicle to **available**, unless it has separately been marked retired.

---

8. Reports & Analytics

- **Dashboard KPIs** — see §2.
- **Fuel Efficiency** — per-vehicle km/liter, best to worst.
- **Operational Cost** — per-vehicle fuel + expense + maintenance cost vs. revenue and profit.
- **Driver Performance** *(Financial Analyst / Fleet Manager only)* — per-driver trip count, distance, revenue.
- **Export Trips (CSV)** *(Financial Analyst / Fleet Manager only)* — downloads a spreadsheet of all completed trips.
- **Analytics** page presents these visually (charts) for a faster overview.

9. Notifications

The bell icon shows your personal notifications plus any system-wide announcements (e.g. “Maintenance Due Soon” for a vehicle nearing its service interval). Click a notification to mark it as read.

10. Tracking

A placeholder map view intended for live vehicle location tracking. This is not yet connected to a real GPS/telematics feed in the current release — treat it as a preview of planned functionality.

11. Role Quick-Reference

I want to…	Who can do this
Add/edit/delete a vehicle	Fleet Manager
Add/edit/delete a driver	Safety Officer
Create/dispatch/complete/cancel a trip	Dispatcher, Fleet Manager
Log fuel or an expense	Financial Analyst, Fleet Manager
Open/close a maintenance record	Fleet Manager, Safety Officer
View driver-performance report or export trips	Financial Analyst, Fleet Manager
View dashboards/reports/lists	Any logged-in user

If you try an action your role doesn’t permit, the system will show a permission error rather than silently failing.

12. Troubleshooting

Issue	Likely Cause	What To Do
“Access denied” message	Your role doesn’t include this action	Check §11, or ask a Fleet Manager
Trip won’t dispatch	Vehicle/driver became unavailable, or capacity/license issue	Check the error message — it names the specific rule violated
Trip won’t save (scheduling conflict)	Vehicle or driver already booked in that time window	Check the named conflicting trip, adjust the schedule
Can’t edit a trip	Trip is no longer in Draft status	Cancel and recreate if changes are needed
Data looks slightly out of date	List/report responses are cached for up to 5 minutes	Refresh after a short wait, or perform the action that should have updated it
Password reset email never arrives	No real SMTP configured in this environment	Contact your administrator — in demo/dev setups, reset emails may only appear in a test inbox, not your real one
